

New fiberglass gate can be bent almost down to the ground but will straighten right back up.

## 80 PERCENT LIGHTER THAN STEEL

# You'll Like These New Light Fiberglass Gates

"They're tough, won't rust, and will never need painting. They're also 80 percent lighter than steel," says Larry Hunt, Poly-Pride, Inc., Lancaster, Ohio, about his new fiberglass gates.

The gates are made from 3-in. wide fiberglass rails with an exterior layer of pigmented Nexus veil. They come with a pair of heavy duty strap hinges with screw hooks that fasten onto any wooden post.

"They look great and need almost no maintenance," says Hunt. "The most you'll ever have to do is replace the aluminum riv-

ets. Fiberglass has 10,000 to 20,000 psi tensile strength so the gate is very strong. You can't dent it and if it gets bent over it just straightens back up."

The gates are available in orange, green, and yellow and in seven lengths from 4 to 16 ft. A 4-ft. long gate sells for \$49.95 plus S&H while a 16-ft. model sells for \$99.95 plus S&H. The gates can be custom built.

## Deere Chopper Attachment Windrows Straw

A new straw chopper attachment for late model Deere combines drops straw in a uniform 4-ft. wide windrow.

It consists of a metal hood and two mounting arms. You simply unbolt the existing straw spreader and replace it with the bolt-on attachment.

"When baled with a large square, small square or large round baler, we're getting approximately 25 percent more straw in the bale out of these windrows," says Larry Pravechek of Pravechek Farm Supplies, manufacturer. "That means fewer bales to haul and easier spreading when bales are used."

Can be used on wheat, oats, corn and soybean residue, he says.

Available for Deere 9400, 9500 and

9600 series combines.

Sells for \$599 plus S&H.

Contact: FARM SHOW Followup, Pravechek Farm Supplies, N 5085 Towline Rd., Luxemburg, Wis. 54217 (ph 800 445-9682 or 920 845-2732).

Front-mount boom lets you use the horsepower you've already got to do your spraying and, unlike a pull-type, eliminates wheel tracks that can damage narrow row crops.

## "LESS EXPENSIVE AND BETTER VISIBILITY THAN SELF-PROPELLED MODELS"

# Front-Mount Sprayer

"Our new front-mount sprayer operates much like a self-propelled model but costs only a fraction as much. It offers better visibility than a pull-type model and doesn't have wheels that can damage the crop," says Ross Yocom, Yocom Bros., Inc., Cable, Ohio.

The 60-ft., 3-section boom can be raised up to 4 ft. off the ground and folds hydraulically against the sides of the tractor for transport. The boom mounts on a quick hitch adaptor that mounts permanently on the tractor frame. A pair of tanks, available in 300, 400, and 500-gal. sizes (total capacity), mount on the tractor 3-pt. Standard equipment includes a Raven SCS 440 controller and a V & M hydraulic multiplier to operate the 5-way folding boom. Other options are available.

"It lets you use the horsepower you've already got to do your spraying," says Yocom. "It's about the same price as a pull-type sprayer, but it eliminates a set of wheel tracks that can damage drilled or narrow row crops.

Also, the front-mount boom offers great visibility. Equipped with tanks totaling 500 gal. capacity and a Raven monitor, it sells for less than \$15,000. Commercial self-propelled sprayers sell for up to \$100,000, although they can be used in higher crops. It really works good on Roundup Ready soybeans where you want to keep the booms as close to the beans as possible in order to reduce spray drift."

The company also offers new "Turbo Drop" spray nozzles, imported from Germany, that are designed to reduce drift. The nozzles are equipped with a small orifice that sucks in air and mixes it with the liquid, resulting in large air-filled droplets that bust apart when they hit the plant.

The nozzles sell for \$18 apiece.
