

"They're exact duplicates, right down to the nailheads," says Madalene Price.

POLE BUILDING REPLICA

New 1/64th-Scale Shed Stores Mini-Farm Toys

Whether you're an avid collector of toy farm machinery or have youngsters who need a place to store toys, you'll like this new 1/64th-scale pole barn shed designed by John and Madalene Price, Lizton, Ind.

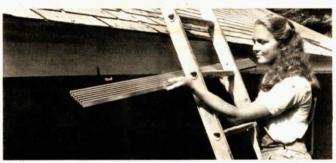

"It's a replica of metal pole building sheds found on nearly every farm," says Madalene. "They're made of fiber board, printed in exact duplication of the real thing right down to the ribs in the metal and the nail-heads."

Sheds come in kit form with the base and roof separate. You glue the

two together to assemble. Colors available are red with white trim, blue with white trim, brown with white trim and all white.

The smallest shed is 10 by 4 by 5-in. has one open side, and sells for \$5.00. A medium-size shed is 10 by 5 by 8-in., has two open doors, and sells for \$6.00. The largest shed is 10 by 5 by 10-in., has two open doors and two open sides, and sells for \$7.00.

For more information, contact: FARM SHOW Followup, John and Madalene Price, Rt. 1, Box 159, Lizton, Ind. 46149 (ph 317 994-5718).

Angled flow-through gutter design disperses water away from house in tiny droplets.

"Weather Foil" Replaces Regular Rain Gutters

A tumble from the edge of his roof while cleaning out a clogged rain gutter let Dick Schapker to develop an alternative to conventional rain gutters.

His innovative Weather-Foil system dispenses rain as it runs off the roof. Its unique design makes it virtually impossible to plug with leaves, and also helps eliminate the problem of snow and ice dam formation. The system can be used on any building that now uses gutters.

Key to success of the Weather-Foil system are the 17 oz., 5-ft. long aluminum panels. Each panel has 7 angled aluminum fins that disperse water in tiny droplets to the ground. Roof run-off no longer runs along the gutter and empties into downspouts.

Since the Weather-Foil system

doesn't have gutters to catch leaves, you don't have to climb a ladder to the roof every year. If for any reason you should need to clear debris off the panels, you can easily do so from the ground by spraying water on the underside of the panels.

Installation is easy. There aren't any elbows, hinges and slopes to worry about. You simply install brackets to the fascia board, then slip on the Weather-Foil panels. They can be painted to match building decor.

Weather-Foil sections sell for \$14.95 per 5-ft. section (mounting brackets included).

ALL-CORN "CORNHUSKER" CEREAL NOW ON THE MARKET

Farmer Cooks Up 'Corny' New Breakfast Cereal

A Nebraska corn farmer, fed up with low commodity prices, recently introduced a first-of-its-kind breakfast cereal to the market.

Don Grubb, who farms near Sutherland and also teaches at a local college, says experts told him farmers have to develop their own products and take them "right to the table". So he began looking into various ideas and, at the suggestion of food and nutrition experts, decided to work with hi-lysine corn, a variety discovered in 1963 that's high in amino acids and is described by nutritionists as an "almost perfect food". Don, and his wife Ann, came up with an idea for a whole grain breakfast cereal, made from whole grain hilysine corn meal, that's extruded into a star shape and lightly coated with fructose and cinnamon. There are no additives in the cereal.

Working with a professor at the University of Nebraska and with Crow's Hybrid Seed Corn Company, the Grubbs found a company to produce the cereal. With the help of art students, they came up with a design for the cereal box and a name Cornhusker All Stars. The boxes are being specially produced by a boxmaking firm and the Grubbs, who have bought the necessary equipment, are doing the final packaging. They hope to get national distribution for the cereal, which now appears only in Nebraska groceries, in the near future.

"Many nutritionists and health food enthusiasts have been making strong claims about the benefits of eating hi-lysine corn—including the speculation that it may help prevent cancer—but we just say that it's an

"It's an almost perfect food," say the farmer-manufacturers of the first hi-lysine corn cereal on the market.

almost perfect food," says Ann Grubb, noting that the cereal is priced competitively with other breakfast cereals and comes in an 18-oz. box. "We're the first hi-lysine corn cereal on the market but we've heard that Kellog and other cereal companies are looking into it."

For a sample of Cornhusker All Stars, send \$2.50 to: FARM SHOW Followup, Don Grubb, Eagle Roost Farms, Rt. 1, Box 164A, Sutherland, Neb. 69165 (ph 308 386-2352).
